19/01/2018

Note Taker: Anthony

<u>Topics Discussed</u>

The TA has informed our group on the following requirements for next week, and the week after (Sprint 1 due date)

Tasks Due Next Week (Jan 26th)

1. Setup git - DONE
2. Add all members to it – Waiting for Ruochen to make a git account
3. Each person should perform 1 pull request (can be a simple text file, doesn't matter) – Not Done!
4. Describe the project – Not Done, Anthony + Ruochen will take care of this
5. At least 3 User stories/requirements and their sub issues on GIT & in documentation (Anthony + Ruochen will take care of this)

Tasks Due Week After Next Week (Feb 2nd)

1. After communicating w/ TA on the 26th, we will get further requirements, and we should write-up a more complete set of of User Stories and their respective subtasks.
2. We should show a template (html + css) of our website. Any added features we have at this point in terms of loading dynamic data via a database is purely *extra* to the requirements of Sprint 1, yet we will be ahead as we can assume the client (the TA) will ask for the Login, Ask, and Answer features – it is intrinsic to our website. He can only ask us to add features ontop of what we already have, or add new features, but he won't ask us to remove these essential ones.
3. Should have all the stories and substasks on both git and in a fully documented form
4. The documentation should also include the full scheme of the website – features, layout, functionality, future increments, and so on.
